

PEER & PRACTICE ASSESSMENT 2.0: STREAM 1 WORKBOOK

 Member Name and Registration #

Assessor

Date

CHIROPRACTIC SCOPE OF PRACTICE

**Reference – Standard of Practice S-001: Chiropractic Scope of Practice*

	Yes	No	Comments
1. All activities and services, including all diagnostic and therapeutic procedures, performed by the member:			
(1) relate to the chiropractic scope of practice as set out in the <i>Chiropractic Act, 1991</i> , and,	<input type="checkbox"/>	<input type="checkbox"/>	_____
(2) appears to have achieved, maintained and can demonstrate clinical competency in diagnostic or therapeutic procedures used.	<input type="checkbox"/>	<input type="checkbox"/>	_____
2. The member uses adjunctive diagnostic and therapeutic procedures that are in the public domain, such as:	<input type="checkbox"/>	<input type="checkbox"/>	
• Provides nutritional counseling			
• Prescribes orthotics			
• Provides lifestyle, and exercise advice			
• Utilizes various therapeutic modalities such as ultrasound, IFC, cold laser therapy			
• Other: _____			_____
3. Member appears to be providing diagnostic and therapeutic procedures specifically prohibited, such as:	<input type="checkbox"/>	<input type="checkbox"/>	
• Dark field microscopy			
• Hyperbaric oxygen therapy			
• Pelvic or prostate examinations			
• Vega testing			_____

	Yes	No	Comments
4. In responding to general health-related questions by patients that relate to controlled acts outside the chiropractic scope of practice, the member: <ul style="list-style-type: none"> • advises the patient that the performance of the act is outside the chiropractic scope of practice and the patient should consult with a health care professional who has the act within his/her scope of practice; • responds in a professional, accurate and balanced manner in the context of providing primary health care to the patient consistent with the chiropractic scope of practice; and • Encourages the patient to be an active participant in his/her own health care which allows the patient to make fully informed decisions concerning his/her health care. 	<input type="checkbox"/>	<input type="checkbox"/>	
5. In responding to general, health-related questions, the member is aware that: <ul style="list-style-type: none"> • Members are restricted from treating or advising outside the chiropractic scope of practice 	<input type="checkbox"/>	<input type="checkbox"/>	
6. Member appears to comply with the standard of practice	<input type="checkbox"/>	<input type="checkbox"/>	
7. <i>If no</i> – How is the member non-compliant? (provide examples)			

Disposition: Appears to meet the minimum level of competency Room for improvement (see comments)

CONSENT

**Reference – Standard of Practice S-013: Consent*

	Yes	No	Comments
1. Consent is properly documented in the records (fully informed, voluntarily given, and evidenced in written form signed by the patient or otherwise documented in the patient record) and obtained for: <ul style="list-style-type: none"> a) Examination b) Chiropractic care or plan of care c) Acupuncture (if appropriate) d) Orthotics (if appropriate) 	<input type="checkbox"/>	<input type="checkbox"/>	

2. Member understands that:

(1) consent is not a 'one-time' only event and must be updated if the patient's condition or plan of management changes

Yes No Comments

(2) the risks/benefits of treatment vs. no treatment must be reviewed on an ongoing basis

3. Member understands that informed consent includes the following:

(1) an explanation of the diagnostic and therapeutic procedure

(2) a statement of the anticipated goal or outcome

(3) alternatives, if any

(4) effects, risks and side-effects of both the use and non-use of the diagnostic and therapeutic procedure

4. Member understands how to determine capacity to consent and what steps to take if a patient lacks capacity to consent

Disposition: Appears to meet the minimum level of competency Room for improvement (see comments)

COMMUNICATION AND COOPERATION WITH CCO

*Reference – Standard of Practice S-020: Communication and Cooperation with CCO

	Yes	No	Comments
1. Under the <i>Regulated Health Professions Act, 1991 (RHPA)</i> , Regulations made under the <i>Chiropractic Act, 1991</i> and CCO by-laws members are expected to cooperate with CCO and its statutory committees. When CCO makes reasonable requests for information, when CCO requires a specific action from a member or when attendance at a CCO meeting or hearing is requested to address an area of concern, the member understands it is their professional responsibility of each member to cooperate with these requests and communicate with CCO in a timely manner.	<input type="checkbox"/>	<input type="checkbox"/>	_____
2. Member understands that It may be considered an act of professional misconduct for a member to refuse to reasonably cooperate with CCO	<input type="checkbox"/>	<input type="checkbox"/>	_____
5. Member has made changes to practices in order to adopt new and revised regulations, standards, policies and guidelines.	<input type="checkbox"/>	<input type="checkbox"/>	_____

Disposition: Appears to meet the minimum level of competency Room for improvement (see comments)

OBSERVATIONS OF THE PHYSICAL PREMISES AND OFFICE SPACE

Reference: Ontario Regulation 852/93, CCO Regulation R-008, Under the *Chiropractic Act, 1991*. Effective Date: December 31, 1993. No amendments as of December 31, 1996

The following are acts of professional misconduct for the purposes of clause 51.1 (c) of the Health Professionals Procedural Code.

15. Failing to maintain the member's practice premises in a safe and sanitary manner.

Comments:

Disposition: Appears to meet the minimum level of competency Room for improvement (see comments)

SCENARIO REVIEWS

Assessor will present 5-7 scenarios, from those below, and review each, individually, with the member. The assessor will use the “comments” chart below as a guide as the member provides comments related to each scenario. Please note there is space provided for additional comments to be made in each scenario. The assessor will summarize the performance in the scenario review chart on page 2 of the Report Form.

SCENARIO 1

You have a patient return after some time presenting with a new complaint. All you know is that the complaint began with a mechanism consistent to the area (e.g., a fall with new onset back pain). Identify three things to assess prior to starting care in determining if it is appropriate to proceed with care, given it has been a period of time since their last visit.

SCENARIO 2

Patient recently had a baby and they ask you whether or not they should vaccinate her. What should be the focus of the communication with the patient?

SCENARIO 3

Patient complains of neck pain, dizziness, and shortness of breath as a result of being a heavy smoker; they also have high cholesterol, and say they need “a good crack”. Identify three steps in managing this type of situation.

SCENARIO 4

You have treated Mr. A for a back complaint over a number of years; however, it has been a year since his last visit. As you chat with Mr. A, you notice Mr. A refers to Mary as his wife, while your records indicate his wife’s name was Doris. Mary is his daughter. Mr. A tells you to go ahead with the usual knee treatment but you have never treated Mr. A’s knee before. Mr. A also seems confused about the day of the week. In the past, Mr. A has impressed you with his memory for a 90 year-old man but you are now concerned about his memory. Mr. A claims his health is as good as ever. You know his daughter drove her dad, who lives with her, to the appointment and is waiting for him in the parking lot. What should you do?

SCENARIO 5

After completing a preliminary examination on a patient’s knee that was made more difficult because of acute swelling and pain, you suspect a meniscal tear. Limited early interventions (e.g., assurance, ice, advice or movements) are indicated while working through your differential diagnoses before making a decision about additional testing or referring out. Identify three things the patient needs to know about the differential/working diagnosis in order to be fully informed.

SCENARIO 6

You attend a weekend seminar and are taught a new technique. What criteria must be met in order for you to use that technique with patients on Monday?

SCENARIO 7

You arrange to see a patient early in the morning to accommodate their schedule. You don't show up at the appointed time and the patient is irate. How do you handle situations where the doctor is at fault?

SCENARIO 8

You have a new patient who seeks acupuncture for smoking cessation. He saw that you advertised yourself as a chiropractor and an acupuncturist. Identify three things to be aware of when a chiropractor provides acupuncture services to a patient?

SCENARIO 9

A patient who you haven't seen for a while returns and tells you they went to their physician for low back pain and the physician is referring them to a specialist for a pain blocking injection. They are asking you if they should have that procedure done. Identify three things to be aware of when handling this situation.

SCENARIO 10

You and your patient are very attracted to each other and have discussed the possibility of entering into a romantic/sexualized relationship. What should you not do? What should you do?

SCENARIO 11

An elderly lady who was the victim of a motor vehicle accident comes in for treatment and wants to use her insurance coverage to pay for treatment. She anticipates she will need more insurance and she doesn't want to upset her insurer. How is this handled?

SCENARIO 12

A female patient has been injured in an MVA (contusion to the right lower thigh). It appears to be a straightforward injury. But the patient is insisting there has been a muscle tear and warrants further investigation. What should you do?

SCENARIO 13

You have been working at a multi-chiropractor clinic for three years and have decided to leave and open up your own practice 20 km away. You have your own patients but often other chiropractors may provide care to your patients when you are away and vice versa. There is no written agreement as to the ownership of patient health records. There will be a new

chiropractor taking over at this multi-chiropractor clinic, and there is concern from the clinic owner about who the patients and records belong to. Identify three things to be aware of in this situation.

SCENARIO 14

You have completed the recommended initial phase of care and at the first re-evaluation, the patient reports that they are very happy to have achieved their pre-injury state of health. They do inquire about the value of continuing on with some form of care as they have heard that regular maintenance chiropractic care can be valuable. Identify three things to consider in this scenario.

SCENARIO 15: CONSULTATION AND TAKING A HISTORY

It is your typical office procedure to have the patient fill out paperwork, prior to meeting them. This would include gathering of general biographical information as well as information on their reason for presenting to the office and a general health systems review. Additionally, the patient reads and signs the documentation related to informed consent related to the impending examination. Once this is completed, the patient is ushered into a consultation/exam room to meet with the doctor.

Identify three things the doctor should insure is done before conducting the examination. Identify the one step, in the process outlined above, which is “out of order”.

SCENARIO 16: INFORMED CONSENT

You are preparing your report of findings for the patient based on the recent consultation and examination.

Identify three things which are essential to include in your report in order that consent be considered “informed”.

SCENARIO 17: SCOPE OF PRACTICE

You have been providing chiropractic care to a family for a number of years, typically on a maintenance or wellness basis. This has typically involved full spine, diversified adjustments. On the most recent visit, you are asked to take a look at little Jimmy’s swollen ankle.

Apparently, last evening, at the playground, he fell off the climber and has been limping ever since. Identify three things that should happen next.

SCENARIO 18: BILLING PRACTICES

- A. A patient asks you staff if they would kindly date their July 31st appointment for August 1st because, well, they will better maximize use of their insurance. You should...*
- B. Your block fee policy includes refunding the unused portion of the pre-paid funds, if the patients chooses to discontinue care before the end of the payment contract.*

In order for this to follow CCO billing standards, identify the key elements to providing the refund?

C. Please explain two-tiered billing.

SCENARIO 19: BOUNDARY AND SENSITIVE PRACTICE

*During the course of caring for a patient, it becomes apparent that the patient is suggesting or attempting to initiate a sexual relationship with you.
As soon as you suspect this, you should...*

SCENARIO 20: SOCIAL MEDIA

At Bill's most recent re-assessment, he reports that, thanks to you and your chiropractic care, he is totally and completely headache free! "It's a miracle," he says, "after all these years, all those medical tests, all those drugs, who would have thought! Boy was I wrong about you chiropractors." After graciously accepting his thanks you say that there are lots of other people out there suffering needlessly because "they just don't know". Humbly, you ask: "Bill, could I get your permission to share your story so that we might reach others who need our help? We have a form here for you to sign and say a few words about your story. Only with your permission, we will use it for...

WHAT COMES NEXT?

SCENARIO 21: DELEGATION OF CARE

Excerpts from the office manual of Dr. Tiny Spiney:

- *All new patients complete the intake paperwork, reviewed by front office staff for completion and signature of patient for consent to examination;*
- *Assigned Kinesiologist does history taking with the patient and conducts the initial examination;*
- *Kinesiologist reviews case file with DC and a diagnosis/differential diagnosis or clinical impression is formulated;*
- *Kinesiologist reviews findings with patient and provides the diagnosis/differential diagnosis or clinical impression along with the plan of care;*
- *DC arrives to answer any questions the patient may have and then all relevant parties (i.e. patient and DC) sign the informed consent*
- *Treatment begins with DC providing adjustments and Kinesiologist and other support staff providing other relevant and appropriate adjunctive therapies*

Question: Identify potential steps, in this process, that may not comply with CCO standards of care of patients.

SCENARIO 22: INFORMED CONSENT; REASSESSMENTS

Mildred has been your patient for over 30 years. In fact, she says, often loudly in the reception area so that all can hear: “you are the best, doc, ya keep me going. I don’t know what I’d do without these weekly visits!” Your records reflect that you are providing supportive care, helping manage Mildred’s ongoing, aging body... she has been with you for over 30 years and about to celebrate her 78th birthday! For the past several years there have really been no changes to Mildred’s health or health goals. She has remained stable this whole time with the usual treatments you have given her for, well, many, many years and there really has been no need to do any sort of re-assessment. But, every time you wave good-bye to Mildred after her visit and rousing endorsement you think about the CCO newsletter article reviewing the value of regularly updating the status of all patients.

Question: Should you do more than just “think” about that CCO newsletter article? If so, what?

SCENARIO 23: PROVIDING ASSISTIVE DEVICES, ORTHOTICS, ETC IN THE CONTEXT OF CHIROPRACTIC PRACTICE

List three things that must be in the patient health record to reflect that they were completed in the process of providing an assistive device to a patient in your care?

SCENARIO 24: RETURNING TO PRACTICE OR ACTIVELY CARING FOR PATIENTS AFTER INACTIVE STATUS OR LEAVE

You’ve been off on an extended leave from actively treating patients. In the following scenarios, identify 2-3 things to consider before returning to active practice.

- 1. You are returning to GENERAL Registration after being INACTIVE for 18 months.*
- 2. You have remained registered in the GENERAL category of registration but have not treated patients for over 5 years.*
- 3. You just realized that you have been registered INACTIVE for 3 complete registration cycles... DANG! What must you do to get back to GENERAL status?*

SCENARIO 25: ADVERTISING

Congratulations, you have been voted: Guelph's Best Chiropractic Office! The local newspaper, who runs this "contest" has asked if you'd like to run an advertisement in the paper that will reveal this great news to your community. "Of course," they say, "it'll be posted on our website and you can link it to yours. Sure, we'll give you some images that you can post on your website and we even have a street side mobile billboard we can roll onto your office lawn for the next 2, 3 or 4 weeks!"

Question: What things should you consider before taking advantage of all this great publicity?

SCENARIO 26: CONFLICT OF INTEREST

The company you have long trusted to provide supplements which you, in turn sell to your patients, has a new promotion: Sell \$1000 of product in a month and you'll receive an all-expenses paid invitation to our next "grand rounds" clinical products update seminar (suitable for structured CE hours with CCO... though they don't directly endorse this!) What thoughts should be rolling around your grey matter?

SCENARIO 27: INSURANCE

Bob has maxed out his chiropractic coverage for the year. He has greatly appreciated all the care you have provided to him. The chiropractic and acupuncture treatments every two weeks have gone a long way to manage his chronic back problems. At your last staff meeting, your front office manager reports that Bob has asked: "Since I have maxed out my chiropractic coverage and I haven't used any of my acupuncture coverage, can we just bill these visits as acupuncture visits?"

What advice will you give to your front office manager?

SCENARIO 28: CARING FOR CHILDREN

Becky is a very mature 14 year old who has been under care since she was a toddler. Recently, though, her parents have divorced. Becky says she wants to keep coming for visits but says that her Mom is dead set against it. Becky thinks it's just because her other Mom is fine with it but says she has to live with her first Mom, at least for the time being.

Well, Doc, what do you do next?

SCENARIO 29: CHIROPRACTIC CARE OF ANIMALS

You are the only chiropractor serving a vast area of northern Ontario, far from the hallowed halls of 130 Bloor St West. In fact, it is so remote that you have trouble getting locum coverage when you want to take a holiday south in the winter... this, despite the fantastic snowmobiling, ice-fishing, snowshoeing and xc skiing opportunities right outside the back

door! One of your patients runs a very successful dog-sledding business. People come from all over just to mush a bunch of huskies through the pristine, snow-covered backwoods on a moon-lit night in the hopes of seeing the northern lights (lots of people, just not locum DCs!). Anyway, Sven, the lead dog-handler, long-time patient and great friend has brought in his lead dog, Balto (named after the Siberian Husky sled dog who led his team on the final leg of the 1925 serum run to Nome, Alaska. This, of course, is the most famous of sled dog names.). Sven: “You gotta help me doc. My Balto cannot lift his head... see? Ever since he jumped off the roof of his doghouse yesterday and slipped on a patch of ice landing. I know how much you help me and my family, well, Balto, IS family. Please doc...”

There are a few possible endings to this story. What might they be?

(Additional fact for consideration: Despite being considered “family”, Balto is not covered under Svan’s family health plan with Greenshields!)

STREAM 1 FILE REVIEW

The assessor will provide feedback on the two files which had been submitted for review. The assessor will ask the member to “tell me the story” for two patient files and check to see that the record of patient health information is an accurate representation of the story shared.

Specific attention should be given to evidence of a logical, flowing connection between the following components of the patient health record:

- consultation,
- examination,
- diagnosis or clinical impression
- report of findings
- consent
- care or plan of care
- treatment entries
- reassessments.

Additionally, assessors should be looking for repetitive or “template” clinical entries in the patient health record. Each patient health record should be unique, to the patient, and demonstrate how the patient is changing over time.

There must be a direct and rational connection between the patient’s presenting complaint, the diagnosis and the recommended treatment.

The patient health record will clearly and completely demonstrate that the chiropractor has:

- Elicited and recorded an appropriate case history,
- Performed and recorded an appropriate physical examination and other relevant investigations congruent with the presenting complaint,
- Derived and recorded a diagnosis congruent with the presenting complaint,
- Derived and recorded an appropriate treatment plan, consistent with the diagnosis and congruent with CCO standards of practice
- Identified clear progress markers or milestones in association with the treatment plan.

Room for improvement in the following areas:

1. Is the record of patient health information an accurate representation of the story shared? Please share general comments, especially those related to how improvements could be made.

2. Can the Peer Assessor interpret an accurate story from a review of the patient health information? Please share general comments, especially those related to how improvements could be made.

3. Is there enough information recorded to ensure that continuity of care would be maintained? (i.e. could another chiropractor step in and pick up where the previous chiropractor left off simply by reviewing the patient health record?)
Is it clear: where the patient's care started, where they are now and where the care is going?
Please share general comments, especially those related to how improvements could be made.

4. Is there a logical, flowing connection between the consultation, examination, diagnosis or clinical impression and report of findings, plan of care, treatment entries and reassessments?

SUMMARY RESULTS OF THE PPA 2.0 FILE REVIEW AND FIRST PPA 1.0:

AREAS IDENTIFIED AS NEEDING IMPROVEMENT IN PPA 1.0 (CIRCLE WHAT WAS IDENTIFIED)	HAVE CHANGES BEEN MADE <input checked="" type="checkbox"/> or <input checked="" type="checkbox"/>	AREAS IDENTIFIED IN PPA 2.0 NEEDING IMPROVEMENT
Chiropractic Scope of Practice	<input type="checkbox"/>	<input type="checkbox"/>
